

THE IDEAL SOLUTION in Fiber Management

Alpha's Ultra High Density Fiber Panel with PEACOC™ Technology

UNPRECEDENTED Fiber Capacity

At just 1RU (Rack Unit), the Alpha Ultra High Density Fiber Panel contains 144 simplex LC connectors, offering up to 60% more fiber connection capacity than a typical fiber panel. As demand grows, the Alpha Ultra High Density Fiber Panel allows for easy and efficient scalability through additional rack units totaling 5,760 connections.

UNPARALLELED Connector Access

PEACOC™ technology allows tool-less access to the front and back connections in the panel. Separating the LC connectors is simple as the numbered connector points fan outwards to isolate and direct exactly where to make a connection. This level of accessibility allows any connection change to be easy, fast, and accurate.

INNOVATIVE & UNIQUE Cable Management

Cable sleeves and routing along the front, back, and side of the rack provides effective wire arrangement. Designed to be agile, these cable sleeves allow the rack unit to open and close easily without the interference of cabling.
